**Subject: Monosodium glutamate in Susta Natural Sweetener**

**Dear Ms. Seymour,**

**No MSG or glutamate signals were detected from two independent and unopened samples of commercially packaged SUSTA Packets by our NMR technology.**

**The <sup>1</sup>H NMR spectra indicated fructose. We did not detect any signals typical of glutamate, viz. 2.05ppm, 2.15ppm, 2.34ppm, 2.36ppm. We conservatively estimated our detection limit at 0.5%.**
